OneVue™ Technical Overview

Secure, cloud-based workflow, alert, and notification platform built on top of Amazon Web Services (AWS)

Whether you are familiar with OneVue or need more in-depth technical details, learn about key technical details and features. Commonly this information is shared with an organization's IT staff.

Product Models: OneVue Sense, Sync, and Notify solutions
August 30, 2019
Primex is the leading provider of solutions to automate and maintain facility compliance, increase efficiencies, enhance safety and reduce risk for enterprise organizations in the healthcare, education, manufacturing and government vertical markets. Primex delivers platforms that utilize a facility's existing network infrastructure to automate, monitor, document and report essential activities performed by the facility management staff including time synchronization, and environmental, temperature and event monitoring.

About the OneVue platform

Primex recognizes today's organizations have complex network infrastructures, a division of responsibilities, and standard information security policies associated with data confidentiality, network bandwidth, and security of the systems deployed at their facilities.

This content is intended to provide information to answer the technical questions you or your staff may have regarding the Primex OneVue platform and Primex devices.

Key technical details

- **Architecture:** OneVue is a multi-tenant solution built on top of Amazon Web Services (AWS). AWS is designed with multiple layers of protection, including secure data transfer, encryption, network configuration, and application-level controls distributed across a scalable, secure infrastructure.

- **Network communication:** Primex devices equipped with Power over Ethernet (PoE), wired Ethernet or Wi-Fi technology communicate over your facility's network to OneVue by way of the HTTPS communication protocol.

- **NTP Servers:** Primex devices that require a NTP time source can be configured for up to three internal or external NTP Servers. Use of external NTP Servers require port 123 to be open.

- **Network Profiles:** A Network Profile in OneVue represents a network at your facility and each Primex network device is assigned to a network. Once assigned, the network settings are downloaded to the Primex device, which allows the device to connect to your facility's network to transmit data to and download settings from OneVue. For OneVue devices that use NTP time, its assigned network also allow its connection to an external NTP Server (time source).

- **Device Preconfiguration:** Device Preconfiguration automates the configuration of Primex OneVue Sense Sensors, Sync Bluetooth Bridges, and Notify Bell Controllers for use with OneVue account before they arrive at your facility - eliminating the need to manually configure a device onsite. Device Preconfiguration is completed after an order is placed with Primex and completed online from your OneVue account. Your OneVue account ID, the devices' assigned network and settings provided are configured into each device and the devices are labeled before they are shipped from Primex - it's an easy online process that allows devices to be ready for use when they arrive at your facility.

- **OneVue Wired Device Configurator (OWDC) Android app:** The OneVue app that provides the experience of managing Primex OneVue Sense Sensors, Sync Bluetooth Bridges, Sync PoE Digital Clocks/Timers, and Notify Bell Controllers locally at a device on a mobile platform. The app provides the flexibility and convenience to add new devices to OneVue (optional method Device Preconfiguration) and also view or edit a device's primary settings. Once you download the app from the Google Play™ store (it's free!), you connect a Primex network device to your Android device and the app guides you through the entire process. It's a simple, easy process that provides onsite configuration.

- **OneVue Device Configurator (ODC) app:** The OneVue app is used to configure OneVue Sync Transmitters. For a new system deployment or when adding or replacing a OneVue Sync Transmitter, the Transmitter is required to be configured onsite with the ODC app. A Transmitter will not operate until it's configured. The ODC app is available for both iOS and Android mobile devices. Download the app from the App Store or Google Play™ (search for Primex OneVue Device Configurator).
• **Primex Device Configuration software:** The Primex OneVue standalone software that can be used to configure the network settings of OneVue Sense Sensors, Sync Bluetooth Bridges, Sync PoE Clocks and Timers, and Notify Bell Controllers locally at a device. Required when your facility's network requires EAP-TLS certificates or when your organization's policies do not allow network settings to be stored in third-party applications.

• **Migrating devices to another network:** When a network assigned to a OneVue Sense Sensor, Sync Bluetooth Bridge, or Notify Bell Controller is required to be updated or changed, there is a required migration procedure - to ensure the devices do not lose their network connection. There are three options to migrate a device to another network, including directly from OneVue, from the OWDC or ODC app, or the Primex Device Configuration software.

• **Access to network profile settings:** Who has access to view and manage network profiles and device network settings is controlled by the role assigned to a user.

### OneVue device and data communication protocols

- Power over Ethernet (PoE)/Ethernet and Wi-Fi enabled devices connect to OneVue using the Hypertext Transfer Protocol Secure (HTTPS) protocol (port 443); all communication is encrypted.
- Power over Ethernet (PoE)/Ethernet and Wi-Fi devices, and the OneVue web browser interface only initiate outbound network connections and do not initiate inbound network connections.
- OneVue client and device data is encrypted in transmit and all sensitive data is encrypted at rest.
- Primex devices support an array of network communication options for secure wireless network connectivity.
- Users can access OneVue from a supported web browser on an internet enabled device, improving flexibility and mobility.
- User access to the OneVue user interface is through a web browser by way of the HTTPS protocol (port 443).
OneVue Network Requirements

The information below provides the details required to allow Primex devices equipped with Ethernet, Power over Ethernet (PoE), or Wi-Fi technology to communicate over a facility's network to OneVue.

Network communication protocols

The OneVue platform is designed, developed, and managed in-house, allowing Primex to control the user experience and provide the highest level of reliability and security.

To support the myriad of network security and protocol standards in today's business environment, Primex Wi-Fi enabled devices offer an array of options for secure network connectivity. This ensures our customers can use and leverage our full line of products without adding costly additional IT infrastructure.

Wi-Fi supported specifications

Applies to: All OneVue Sensors

- Wireless Networking Protocols: 802.11b, 11g, 11n single stream (2.4 GHz)
- Wireless Security Protocols: WEP (Open & Shared), WPA (TKIP & AES), WPA2 (TKIP & AES)
- Wireless Authentication Protocols: None, EAP-FAST, EAP-TLS, EAP-TTLS (MSCHAPv2), PEAP v0 (MSCHAPv2), PEAP v1 (GTC)
- Network Communication Protocols: Hypertext Transfer Protocol Secure (HTTPS)/TLS 1.2
- IP Addressing: Dynamic Host Configuration Protocol (DHCP), static IP addressing
- Data Packet Size: typically less than 5 kilobytes (kB)

Power over Ethernet (PoE) and Ethernet supported specifications

Applies to: OneVue Temperature Sensor, Differential Pressure Sensor, Water Leak Sensor, Contact Closure Sensor, OneVue Sync Transmitters, OneVue Bluetooth Bridge, OneVue Bell Controller

- Power over Ethernet (PoE): Compliant with IEEE 802.3af standard
- Network Communication Protocols: Hypertext Transfer Protocol Secure (HTTPS)/TLS
- IP Addressing: Dynamic Host Configuration Protocol (DHCP), static IP addressing
- Data Packet Size: typically less than 5 kilobytes (kB)

Network port requirements

Primex Ethernet, PoE, and Wi-Fi enabled devices communicate to OneVue over your facility's network using the Hypertext Transfer Protocol Secure (HTTPS) protocol. OneVue client and device data is encrypted in transmit and all sensitive data is encrypted at rest. An outbound HTTPS connection is established by each device and once complete the IP address is released.

The following ports must be open to allow for outgoing OneVue device communication from your network.
• **Port TCP 443**: required to be open to allow Hypertext Transfer Protocol over TLS/SSL (HTTPS) communication with OneVue and Wi-Fi, Power over Ethernet (PoE)/Ethernet enabled devices.

• **Port UDP 123**: used by Wi-Fi, Power over Ethernet (PoE)/Ethernet devices to access an external NTP Server. Port is required to be open for use with external Network Time Protocol (NTP) Servers. Use of internal NTP Servers is also supported.

**Network firewall requirements**

The OneVue platform runs on the Amazon Web Services (AWS) cloud infrastructure. Organizations with network firewalls in place must proactively allow outbound network communication and file downloads through specific OneVue Domains and URLs. The files downloaded include the Sync device clock list, Notify device schedules, and device setting updates.

OneVue is a high-availability (HA) platform that may change IP addresses at anytime, therefore OneVue does not support the use of firewall IP address filtering.

**If firewall supports wildcards**

**Sync Bluetooth Bridge: Connection to a switch port**

Spanning tree portfast (STP) must be enabled when a switch port is not connected to other routers or switches. Optionally STP can be turned off, which is not the same as disable.

**Email and voice communication**

OneVue generates email alert and report notifications and voice alert notifications. To ensure email notifications are received by system users, please ensure support@primexonevue.com is added to your email program’s safe sender list. OneVue voice alert notifications are sent from phone number (608) 709-7043.
OneVue log in requirements

OneVue is a cloud-based, mobile-first design that can be accessed from any web browser on a smartphone, tablet, laptop or desktop computer. The mobile-first design eliminates the need for separate mobile apps, plug-ins or downloads for optimal viewing on any size screen.

Log in to OneVue requires a user to have an active user account. A user account is assigned to a role(s), which grants their access to OneVue account data and permissions to features.

Be sure to bookmark or favorite the OneVue URL: https://console.primexonevue.com

Supported web browsers

OneVue can be accessed from any of the web browsers below.

• Google Chrome™ most recent version
• Mozilla Firefox® most recent version
• Microsoft® Internet Explorer® versions 9, 10, 11 and higher
• Microsoft Edge most current version
• Apple® Safari®:most recent version
• JavaScript must be enabled and requires a PDF viewer to download reports.

Supported mobile devices

OneVue can be accessed on any of the mobile devices below. JavaScript must be enabled.

• Apple® mobile devices with iOS 7 and greater
• Android mobile devices with 4.2 and greater
